## Overview

1. This report summarises the characteristics of UK-domiciled postgraduate research (PGR) students at English higher education providers with high average tariff scores from 2010-11 to 2017-18.
2. In this report, PGR students are defined as those studying for PhD and MPhil qualifications. ${ }^{1}$ High tariff providers are the top third of English higher education providers (excluding specialist providers, previously funded by the Higher Education Funding Council for England (HEFCE) ${ }^{2}$ ) when ranked by average tariff score of UK domiciled undergraduate entrants. Tariff scores are defined using HESA data from academic years 2012-13 to 2014-15. ${ }^{3}$
[^1]
## Methodology

3. To produce this report, we combined data from the Higher Education Statistics Agency (HESA) student record ${ }^{4}$, HESA alternative provider (AP) student record ${ }^{5}$ and the Education and Skills Funding Agency (ESFA) Individualised Learner Record (ILR) ${ }^{6}$ for the academic years 2010-11 to 2017-18.
4. All numbers have been rounded to the nearest five and percentages to one decimal place. Counts have been suppressed where the number of students is less than 25. Percentages are calculated from totals which include those students with unknown characteristics, who are also included in the charts and tables.
5. The figures throughout the report show the proportions of PGR students for various characteristics. The actual numbers of students used to calculate these percentages can be found in the tables in Annex A. Definitions of the variables used throughout this report can be found in Annex B.

## Provider type

6. Figure 1 shows the proportion of PGR students by provider type. Across the period, the majority of PGR students were at high tariff providers. Since 2010-11, the difference in proportions of PGR students at providers with high average tariff scores and providers with low average tariff scores has narrowed marginally, with the proportion studying at high tariff providers having fallen 4.0 percentage points between 2010-11 and 2017-18. This has been driven by an increase in the number of PGR students at providers with low average tariff scores, from 4,605 in 2010-11 to 6,465 in 2017-18. However, the vast majority remain in high tariff providers; there were 53,565 PGR students in 2017-18, nearly two-thirds of which (64.3 per cent) were from providers with high average tariff scores.
[^2]Figure 1: Proportion of PGR students by provider types

## Age on entry

7. From here onwards, this report considers only those PGR students at providers with high average tariff scores.
8. Figure 2 shows the proportion of PGR students at high tariff providers by age on entry to their PGR course. The data shows that the majority of these students begin PGR courses in the years immediately after graduating from their undergraduate or postgraduate taught study, with over half ( 53.8 per cent) of PGR students in 2017-18 having started their course aged 21 to 25 .

Figure 2: Proportion of PGR students at high tariff providers by age on entry

## Disability

9. Figure 3 shows proportions of PGR students at high tariff providers by disability. The majority (87.3 per cent in 2017-18) did not report a disability. However, the proportion of PGR students at high tariff providers reporting a disability has increased by 4.8 percentage points between 2010-11 and 2017-18.

Figure 3: Proportion of PGR students at high tariff providers by disability

## Ethnicity

10. Figures 4 and 5 show proportions of PGR students at high tariff providers by ethnicity, with the second chart disaggregating those from minority ethnic backgrounds for a more detailed view. Nearly eight out of 10 PGR students at high tariff providers ( 79.5 per cent) were white in 201718.
11. All ethnic groups have seen a rise in the number of PGR students at high tariff providers between 2010-11 and 2017-18, apart from Asian students.
12. Nonetheless, there has been little change in the proportion of minority ethnic students at high tariff providers: 15.7 per cent in 2010-11 compared to 17.1 per cent in 2017-18.

Figure 4: Proportion of PGR students at high tariff providers by ethnicity

Figure 5: Proportion of PGR students at high tariff providers by ethnicity

## Indices of Multiple Deprivation (IMD) quintile

13. Figure 6 shows proportions of PGR students at high tariff providers by IMD quintile. It should be noted that IMD quintiles are calculated using the home postcode provided by the student on entry to their course. For many PGR students, this will differ to their postcode at 18.
14. Overall, there has been little change in the proportions of students from each of the IMD quintiles amongst PGR students at high tariff providers. The biggest change has been the proportion of students from the most deprived areas (IMD quintile 1), which increased from 9.4 per cent in 2010-11 to 11.1 per cent in 2017-18.
15. The gap between the proportions of PGR students at high tariff providers from the most deprived quintile and the least deprived quintile has fallen slightly, from 16.7 percentage points in 2010-11 to 15.3 percentage points in 2017-18.

Figure 6: Proportion of PGR students at high tariff providers by IMD quintile

Note: IMD quintiles are only calculated for students who were domiciled in England prior to their course. Those who were domiciled in England but have not provided a postcode, or whose postcode is not associated with an IMD quintile, have been included as 'unknown'. Those who were not domiciled in England have been excluded.

## Sex

16. Figure 7 shows the proportion of PGR students at high tariff providers by sex. From 2010-11 to 2017-18, the difference in the proportions of male and female students has decreased. However, there remains a higher proportion of male PGR students at high tariff providers in 2017-18 (52.1 per cent compared to 47.9 per cent).
17. This is in contrast to the UK-domiciled undergraduate population, the majority of which (56.0 per cent in 2017-18) are female. ${ }^{7}$ This difference suggests that female undergraduates are less likely to go on to study in PGR than male undergraduates.

Figure 7: Proportion of PGR students at high tariff providers by sex

Note: A small number of students whose sex is reported as 'Other' have been excluded from this chart. They have been included in the counts in Annex A.

[^3]
## Annex A: Data tables

Provider type

| Year | Specialist providers |  | Providers with high average tariff scores |  | Providers with medium average tariff scores |  | Providers with low average tariff scores |  | Unclassified providers |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | N | \% | N | \% | N | \% | N | \% | N | \% |  |
| 2010-11 | 2,705 | 5.4\% | 34,165 | 68.3\% | 8,545 | 17.1\% | 4,605 | 9.2\% | 35 | 0.1\% | 50,055 |
| 2011-12 | 2,820 | 5.3\% | 35,935 | 67.6\% | 9,325 | 17.5\% | 5,090 | 9.6\% | 30 | 0.1\% | 53,195 |
| 2012-13 | 2,610 | 5.0\% | 34,900 | 66.9\% | 9,400 | 18.0\% | 5,225 | 10.0\% | 60 | 0.1\% | 52,185 |
| 2013-14 | 2,460 | 4.7\% | 35,215 | 66.7\% | 9,445 | 17.9\% | 5,585 | 10.6\% | 100 | 0.2\% | 52,805 |
| 2014-15 | 2,500 | 4.8\% | 34,025 | 65.5\% | 9,595 | 18.5\% | 5,700 | 11.0\% | 110 | 0.2\% | 51,930 |
| 2015-16 | 2,400 | 4.6\% | 33,175 | 64.1\% | 9,805 | 19.0\% | 6,200 | 12.0\% | 150 | 0.3\% | 51,730 |
| 2016-17 | 2,545 | 4.8\% | 34,260 | 64.4\% | 9,820 | 18.5\% | 6,420 | 12.1\% | 145 | 0.3\% | 53,190 |
| 2017-18 | 2,515 | 4.7\% | 34,445 | 64.3\% | 9,865 | 18.4\% | 6,465 | 12.1\% | 275 | 0.5\% | 53,565 |

Note: 'N' denotes number of students.

## Age on entry

| Year | Under 21 |  | 21 to 25 |  | 26 to 30 |  | 31 to 40 |  | 41 to 50 |  | 51 and over |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | N | \% | N | \% | N | \% | N | \% | N | \% | N | \% |  |
| 2010-11 | 65 | 0.2\% | 17,325 | 50.7\% | 6,345 | 18.6\% | 5,805 | 17.0\% | 2,940 | 8.6\% | 1,690 | 4.9\% | 34,165 |
| 2011-12 | 60 | 0.2\% | 18,270 | 50.8\% | 6,810 | 19.0\% | 6,095 | 17.0\% | 2,990 | 8.3\% | 1,705 | 4.8\% | 35,930 |

| 2016-17 | 3,435 | 10.6\% | 5,760 | 17.7\% | 6,740 | 20.7\% | 7,510 | 23.1\% | 8,595 | 26.4\% | 485 | 1.5\% | 32,520 |
| 2017-18 | 3,620 | 11.1\% | 5,710 | 17.5\% | 6,650 | 20.3\% | 7,610 | 23.3\% | 8,640 | 26.4\% | 470 | 1.4\% | 32,700 |

Note: IMD quintiles are only calculated for students who were domiciled in England prior to their course. ' N ' denotes number of students.

## Sex

| Year | Female |  |  |  | Other sex |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | N | \% | N | \% | N | \% |  |
| 2010-11 | 16,040 | 46.9\% | 18,125 | 53.0\% | - | - | 34,165 |
| 2011-12 | 16,885 | 47.0\% | 19,045 | 53.0\% | - | - | 35,930 |
| 2012-13 | 16,280 | 46.6\% | 18,615 | 53.3\% | - | - | 34,890 |
| 2013-14 | 16,485 | 46.8\% | 18,715 | 53.1\% | - | - | 35,200 |
| 2014-15 | 16,050 | 47.2\% | 17,965 | 52.8\% | - | - | 34,015 |
| 2015-16 | 15,710 | 47.4\% | 17,450 | 52.6\% | - | - | 33,160 |
| 2016-17 | 16,335 | 47.7\% | 17,890 | 52.2\% | 35 | 0.1\% | 34,260 |
| 2017-18 | 16,460 | 47.8\% | 17,910 | 52.0\% | 75 | 0.2\% | 34,445 |

Note: ' N ' denotes number of students.

## Annex B: Definitions of variables

## Provider type

1. Provider types are defined by the average tariff scores of entrants at a given provider, using HESA data from academic years 2012-13 to 2014-15. High tariff providers are the top third of English higher education providers (excluding specialist providers, previously funded by HEFCE) when ranked by average tariff score of UK domiciled undergraduate entrants. ${ }^{8}$

## Age on entry

2. The age recorded is the age of the student on 31 August in the year in which they started their PGR study, calculated from the date of birth, as reported by the student. For more detail, see the definition of 'B3MONBIRTHDATE' in the OfS '2019 core algorithms' document. ${ }^{9}$

## Disability

3. This field indicates whether the student has reported a disability to their provider. For more detail, see the definition of 'B3MONDISABLE' in the OfS '2019 core algorithms' document. ${ }^{10}$

## Ethnicity

4. This field indicates ethnicity, as reported by the student. For more detail, see the definition of 'B3MONETHNIC' in the OfS '2019 core algorithms' document. ${ }^{11}$

## IMD quintile

5. The Index of Multiple Deprivation (IMD) 2015 is a measure of levels of deprivation for small areas within England. It is calculated at lower-layer super output area (LSOA) level and combines a number of measures to determine levels of deprivation. It is produced by the Ministry of Housing, Communities and Local Government. ${ }^{12}$ In this report, we group areas into IMD quintiles, where the most deprived areas are in quintile 1 and the least deprived are in quintile 5 .
6. Since the IMD measure only covers areas in England, students who were domiciled outside of England at the start of their course have been removed from the proportion calculations. Those who were domiciled in England but have not provided a postcode, or whose postcode is not associated with an IMD quintile, have been included as 'unknown'.

[^4]7. It should be noted that IMD quintiles are calculated using the home postcode provided by the student on entry to their course. For many PGR students, this will differ to their postcode at 18, and therefore will not always reflect the student's socioeconomic background.

## Sex

8. For more detail, see the definition of 'B3MONSEX' in the OfS ' 2019 core algorithms' document.
